"Aginactin, an agonist-regulated F-actin capping activity is associated with an HSC70 in Dictyostelium.";
J. Biol. Chem. 268:23267-23274(1993).
-!- FUNCTION: AFFECTS ACTIN POLYMERIZATION THROUGH INTERACTION WITH THE ACTIN-BINDING PROPEIN CAP32/34. ACTS AS A CHAPERONE BY STIMULATING THE REPOLING OF DENATURATED CAP32 AND CAP34.
-!- SUBCELLULAR LOCATION: CYTOPLASMIC. FOUND IN F-ACTIN-RICH REGIONS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

PREEXISTENT COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE
-!- FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE
-!- FUNCTION: TARNILLERED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN
OF NEWLY TRANSLAFED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN
ORGANELLES. THE HSP70S IN MITOCHONDRIA AND THE ENDOPLASMIC
RETICULUM PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORCE FOR
PROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGNAL TRANSDUCTION
PATHWAYS IN COOPERATION WITH HSP90. THEY PARTICIPATE IN ALL THESE
CONFORMATIONS OF OTHER PROTIENS. THEY BIND EXTENDED PEPTIDE
SECMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES
DURING TRANSLAFORD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

-I- FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE PREZISTENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING OF NEWLY TRANSLATED POLYFEPTIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THESE CHAPERONES PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE NONNATURE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDES SEGNENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING STRESS-INDICED DAMAGE.
                                                                                                                                                                                                                                                                                 Gaps

-I-FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE
PREEXISPERT PROTEINS TAGENEGATION AND MEDIATE THE POLLING
OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN
OR NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN
ORGANELLES. THESE CHAPERONES PARTICIPATE IN ALL THESE PROCESSES
THROUGH THEIR ABILLITY TO RECOGNIZE NONNATIVE CONFORMATIONS OF
ORTHER PROTEINS. THEY BIND EXTENDED DEPTIDES EGGMENTS WITH A NET
HYDROPHOBIC CHARACTER EXPOSED BY POLLOWING STRESS-INDUCED DAMAGE.
-I-SIMILARITY: BELONGS TO THE HEAT SHOCK PROTEIN 70 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PROCHIM. Biophys. Acta 1219:64-72(1994).

11 FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE PREXISEPRENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THESE CHAPERONES PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE NONNATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE SEGMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DORING TRANSLATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING STRESS-INDUCED DAMAGE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Rattus norvegicus (Rat).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MATLETAR molecular chaperone HSC70 - California sea hare (fragment)

M.Alternate names: heat shock protein 70 homolog HSC70
C; Species: Aplysia californica (California sea hare)
C; Species: Aplysia californica (California sea hare)
C; Species: Aplysia californica (California sea hare)
C; Species: 04.56-1096
FX-05-1096
```

C;Accession: A44461
Kruhl, D.; Kennedy, T.E.; Barzilai, A.; Kandel, E.R.
J. Cell Biol. 119, 1069-1076, 1992
A;Title: Long-term sensitization training in Aplysia leads to an increase in the exprace number: A44261
A;Stetus preliminary; not compared with conceptual translation
A;Molecule type: nucleic acid
A;Residues: 1-209 < KUH>
A;Note: sequence extracted from NCBI backbone (NCBIP:118951)

C;Genetics: A;Gene: HSP70a C;Function:

ŏ g

dusk-type molecular chaperone 70IV - sea urchin (Paracentrotus lividus)
N;Alternate names: heat shock protein 70IV; hsp70IV protein
C;Specias: Paracentrotus lividus (common urchin)
C;Date: 10-Jun-1993 #sequence_revision 10-Jun-1993 #text_change 20-Aug-1999
C;Accession: JC1391
R;Sconzo, G;,Scardina, G;; Ferraro, M.G.
A;Title: Characterization of a new member of the sea urchin Paracentrotus lividus hsp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A; Description: involved in protein folding and assembling/disassembling of protein co C; Superfamily: heat shock protein 70 C;Keywords: ATP; heat shock; molecular chaperone; stress-induced protein
                                 R;Sainis, I.; Angelidis, C.; Pagoulatos, G.; Lazaridis, I.

                                                                                                                                               Gene 146:273-278(1994).

Gene 146:273-278(1994).

- PEDICTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE
PREEXISTENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING
OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN
ORGANELLES. THESE CHAPERONES PARTICIPATE IN ALL THESE PROCESSES
THROUGH THEIR ABILITY TO RECOGNIZE NONNATIVE CONFORMATIONS OF
OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE SEGMENTS WITH A NET
HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota; Fungi; Ascomycota; Pezizomycotina; Eurotiomycetes;

-!- FUNCTION: SSA2 MAY PLAY A ROLE IN THE TRANSPORT OF POLYPEPTIDES BOTH ACROSS THE MITOCHONDRIAL MEMBRANES AND INTO THE SINOPLEABMATIC RETICULUM. A FUNCTIONAL DIFFERENCE BETWEEN YEAST SSA1 AND SSA2 PROTEINS IS EXPECTED. SSA2 CAN PARTICIPATE IN THE ATP-DEPENDENT DISASSEMBLY OF CLATHRIN-COATED VESICLES.
                                                                                                                                                                                                                                                                                                                                                                                              В.,

J. Blol. Chem. 268:2287-23274 (1993).

1- FUNCTION: A PEFECTS ACTIN POLYMERIZATION THROUGH INTERACTION WITH THE ACTIN-BINDING PROTEIN CAP32/34. ACTS AS A CHAPERONE BY STIMULATING THE REFOLDING OF DENATURATED CAP32 AND CAP34.

1- SUBCELLULAR LOCATION: CYTOPLASMIC: FOUND IN F-ACTIN-RICH REGIONS OF THE CELL CORTEX AND CELL PROTRUSIONS.

1- DEVELOPMENTAL STAGE: HEAT SHOCK COGNATE PROTEINS ARE EXPRESSED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MSSIGIDLGTTYSCVGVWQNDRVEIIAND -> IHHHINGNATWVVESGPVSEVLSFN (IN REF. 2).

Anim. Genet. 25:196-196(1994).

-!-FONCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE
-!-FONCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE
-!-FONCTION: IN COOPERATION WITH CYTOSOL AS WELL AS WITHIN ORGANELLES. THE HSP70S IN MITOCHONDRIA AND THE ENDOPLASMIC RETICULUM PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORCE FOR PROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGNAL TRANSDUCTION PATHWAYS IN COOPERATION WITH HSP90. THEY PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE NONNATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE SEGMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION OF FOLLOWING PRANSLATION, OR FOLLOWING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

C. PERZISTENIP PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING

C. FUNCTION: IN COOPERATION WITH OTHER CRYPOSOL AS WELL AS WITHIN OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN OF ONGANELLES. THE HSP70S IN MITOCHONDRIA AND THE ENDOPLASHIC OFFORTION THAY AND THOUGH THE RANSDUCTION FROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGNAL TRANSDUCTION PROCESSES THROUGH THEIR ABILITY TO RECOONIZE NONNATIVE

CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE SEGMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES CONFORMATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING STRESS - INDUCED DAMAGE.

C.I. INDUCTION: BY HEAT SHOCK.

C.I. SIMILARITY: BELONGS TO THE HEAT SHOCK PROTEIN 70 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   extracts

Gene 146:273-278(1994).

Gene 146:273-278(1994).

- I- FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE PREXISTENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING OF NEWLY TRANSLATED POLYEEPTIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THESE CHAPERONES PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILLTY TO RECOGNIZE NONNATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDES SEGMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING STRESS-INDUCED DAMAGE.

-I- SIMILARITY: BELONGS TO THE HEAT SHOCK PROTEIN 70 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Perry M.D., Aujame L., Shtang S., Moran L.A.; "Structure and expression of an inducible HSP70-encoding gene from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              H871_MOUSE STANDARD; PRT; 641 AA.

Fatent No. 5962283
GENERAL INFORMATION:
APPLICANT: Warren, Patrick V.
APPLICANT: Wannson, Ronald V.
TITLE OF INVENTION: TRANSAMINASES AND AMINOTRANSFERASES
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson, P.C.
STREET: 4225 Executive Square, Suite 1400
Sequence 32, Application US/08599171A
Patent No. 5814473
GENERAL INFORMATION:
APPLICANT: WARREN, Patrick V.
TITLE OF INVENTION: TRANSAMINASES AND AMINOTRANSFERASES
NUMBER OF SEQUENCES: 32
CORRESPONDENCE ADDRESS: ADDRESSE: CARELLA, BYRNE, BAIN, GILFILLAN, ADDRESSE: CARCLLA, STEWART & OLSTEIN
STREET: 6 BECKER FARM ROAD
